

The Green Catalogue 2010

Glossary of Terms

To make your journey through the Green catalogue a little more informative, we have listed a few definitions below that may help to make the terminology less daunting.

All the items in this catalogue have been designed specifically to benefit the environment and the people producing them.

Recycled; adjective (Not to be confused with recyclable) having been used before and then processed so that it can form a new product.

Recycling; noun [U] when paper, glass, plastic etc. is put through a process so that it can be used again.

Biodegradable; adjective

Able to decay naturally and harmlessly:

Biodegradable products and packaging helps to limit the amount of harmful chemicals released into the atmosphere.

NON-Polluting;

Intentionally taking steps to avoid making an area or substance, usually air, water or earth, dirty or harmful to people, animals and plants, especially by adding harmful chemicals.

Organic; adjective

Not using artificial chemicals in the growing of plants and animals for food and other products.

Sustainable; adjective

Able to continue over a period of time:

Causing little or no damage to the environment and therefore able to continue for a long time.

Ethical; adjective

Adhering to ethical and moral principles (e.g.: "It seems ethical and right") Conforming to accepted standards of social or professional behaviour.

Bringing together recycled, biodegradable, organic and sustainable materials, fair trade and ethically produced products and non polluting technology is saving the environment in many ways. Fewer raw materials are being mined, less waste or discarded materials are going to land fill and fewer workers are being exploited.

The changes you make to your buying patterns may seem small but cumulatively the changes each of us implement will make a huge difference.

Sustainable Forestry Management

There are a number of independent bodies with their own sets of criteria for what sustainable forestry means and what minimum standards must be achieved to label goods with their marks.

Leading certification bodies work internationally covering many thousands of producers, converters and re-sellers.

As well as replanting of trees such schemes also make provision in their criteria for good management; the protection of local flora, fauna and wildlife as well as the indigenous people on the land affected.

Such bodies require potential users of their marks to undergo rigorous independent assessment processes before a COC (Chain of Custody) is issued.

All items sold under such schemes must have a COC for each supplier in the entire products life cycle. This means that timber or paper products sold under these labels can be traced back to the original forests from which the timber was harvested.

Please be sure to check when buying wooden or paper products whether they are covered by an independent scheme.

"An estimated 10.4 million hectares of tropical forest were permanently destroyed each year in the period from 2000 to 2005."
Food and Agriculture Organization of the United Nations

These forests, which once covered half of the planet, are irreplaceable and their loss has profound economic, social and environmental impacts.

Since September 2001, all agricultural products and foodstuffs from organic farming may be labelled with the national Bio-Siegel (eco label) of Germany. The small hexagonal logo with the inscription "Bio" brings about clarity, uniformity and orientation for organic or eco products respectively. Consumers can rely on it: "If it says 'Bio' on the outside it contains organic products."

Only producers and manufacturers who comply with the provisions of the EU Organic Farming Regulation and subject themselves to the mandatory inspections may sell their products as organic or eco goods and label them accordingly with the Bio-Siegel.
